822 Heat and Air Expands HVAC Service and Repair Offerings Across Greater DFW

September 14, 2026

Benbrook, TX - September 14, 2026 -
822 Heat and Air, a heating and air conditioning contractor based in Benbrook, Texas, has expanded its commercial HVAC installation and air conditioning repair services to meet growing demand throughout the Greater DFW Metroplex and surrounding suburbs. The expansion reflects the company's ongoing efforts to serve both large-scale commercial clients and homeowners across the region.

The company specializes in complete HVAC installation for commercial and residential customers, offering a full slate of services that includes central air systems, rooftop units, split systems, ventilation solutions, ductwork design, heat pump systems, and building automation systems. With the recent expansion, 822 Heat and Air now provides broader coverage for communities including Crowley, Burleson, Granbury, Joshua, Godley, Cleburne, Fort Worth, Arlington, and Dallas.

Alongside its commercial work, the company continues to grow its residential hvac division, which addresses routine maintenance, targeted repairs, and full system replacements for homeowners. The company's

technicians perform load calculations on every installation and provide diagnostics before any work begins, an approach intended to align each system with the actual needs of the property.

"The expansion allows the company to reach more property owners who need reliable heating and cooling throughout the year," said David, operations lead at 822 Heat and Air. "Demand across the Metroplex has continued to climb, and expanding capacity for both installation and repair helps address that need without customers waiting during peak seasons."

The broadened service area comes as Texas summers place sustained pressure on cooling systems. Small issues that go unaddressed can escalate into full breakdowns during periods of extreme heat, which is why the company has increased its capacity for repair calls and emergency response. The additional coverage also supports commercial operators who depend on consistent indoor climate control for productivity and equipment performance.

The company's expanded lineup of services covers installation, replacement, repair, and ongoing maintenance for both commercial and residential systems. Regular tune-ups remain a central focus, as scheduled maintenance can help prevent breakdowns, improve energy efficiency, and extend the operational life of a system. Ductwork installation and repair are also included, supporting proper air distribution in homes and commercial buildings alike.

"Consistency matters as much as capability," David added. "Every home and business has different requirements, so the goal is to match the right system and service plan to each property rather than applying a single approach across the board."

822 Heat and Air emphasizes transparent pricing and plain-language explanations of its findings before any work is performed. The company's technicians are professionally trained and licensed, and the business operates as a licensed and insured HVAC contractor under license number TACLA65080C. Additional details about coverage areas and offerings are available at 822heatandair.com.

822 Heat and Air is a professional heating, ventilation, and air conditioning company serving commercial and residential clients across the Greater DFW Metroplex and its suburbs. The company provides commercial HVAC, residential HVAC, ductwork, and AC tune-up service, with a focus on energy-efficient solutions and year-round comfort. Financing options are available subject to credit approval and offer eligibility.
